

GNOME Shell extensions

- **Keyboard Informer** [5612 Downloads](#) — show modifier and lock-key states in GNOME Shell.
- **Blur Wallpaper** [919 Downloads](#) — create a smooth, adjustable blurred wallpaper.
- **My Vision** [362 Downloads](#) — save and quickly switch between display profiles.
- **Window Shuffle** [86 Downloads](#) — distribute windows across workspaces and collect them back.

Browser extensions

- **RoutePeek** — display route minimaps, driving distances, and travel times next to website listings using configurable templates.
- **DiMeTrans** — translate Discord messages into Czech in Chrome using your own LibreTranslate endpoint.

Desktop utilities

- **Czenglish** — type Czech while keeping familiar US punctuation and symbol positions with a keyboard layout for Linux and Windows.

Administration tools

- **SafeData** — Universal backup script for LVM volumes and regular directories. It supports rsync and tar backups with include, exclude, or all filtering rules while preserving extended filesystem metadata.
- **Modern Midnight Commander** — Modern Midnight Commander with trash actions, Wayland clipboard support, 256-color DotName skins, and a Nix package.

Development tools

- **MassCode2MdFree** — export a MassCode snippet database to Markdown files with a standalone C++17 command-line tool that preserves the folder hierarchy.

Templates

- **NixonCpp** — Create your C++ applications and libraries. [A running WebAssembly build that documents the project it represents.](#)

Tutorials

- **DevOps: from source code to operations** — a practical Czech tutorial covering local infrastructure, CI/CD, Kubernetes, monitoring, and recovery with Terraform and Ansible.

Music producing hardware & software

- **DreamScaler** — DreamScaler brings music scales, harmony and color to your keys with a standalone app and an LED strip.
- **Bitwig Cheatsheet** — find Bitwig Studio keyboard shortcuts for Windows, Linux, and macOS mapped to a standard ISO/QWERTY keyboard layout.
- **Bitwig Transport Control Script** — control Bitwig Studio transport with mouse side buttons, even when a plugin window has focus, on Linux with X11.
