

GNOME Shell extensions

- **Keyboard Informer** [5643 Downloads](#) — show modifier and lock-key states in GNOME Shell.
- **Blur Wallpaper** [935 Downloads](#) — create a smooth, adjustable blurred wallpaper.
- **My Vision** [368 Downloads](#) — save and quickly switch between display profiles.
- **Window Shuffle** [94 Downloads](#) — distribute windows across workspaces and collect them back.
- **TranslatePlace** — translates selected text through your own local translation API and optionally replaces the selection with the result.

Browser extensions

- **WebTranslatePlace** — translates selected text through your own local translation API and optionally replaces the selection with the result. It also translates Discord messages in Chrome/Chromium, Firefox, Safari, and GNOME Web.

Servers

- **translation-api** — a self-hosted translation server for the WebTranslatePlace browser extension and the TranslatePlace GNOME Shell extension.

Administration tools

- **SafeData** — Universal backup script for LVM volumes and regular directories. It supports rsync and tar backups with include, exclude, or all filtering rules while preserving extended filesystem metadata.
- **Modern Midnight Commander** — Modern Midnight Commander with trash actions, Wayland clipboard support, 256-color DotName skins, and a Nix package.

Development tools and Templates

- **NixonCpp** — Create your C++ applications and libraries. [A running WebAssembly build that documents the project it represents.](#)

Music production hardware & software

- **DreamScaler** — DreamScaler brings music scales, harmony and color to your keys with a standalone app and an LED strip.
- **Bitwig Cheatsheet** — find Bitwig Studio keyboard shortcuts for Windows, Linux, and macOS mapped to a standard ISO/QWERTY keyboard layout.
- **Bitwig Transport Control Script** — control Bitwig Studio transport with mouse side buttons, even when a plugin window has focus, on Linux with X11.
