

GNOME Shell extensions

- **Keyboard Informer** [5657 Downloads](#) — show modifier and lock-key states in GNOME Shell.
- **Blur Wallpaper** [948 Downloads](#) — create a smooth, adjustable blurred wallpaper.
- **My Vision** [368 Downloads](#) — save and quickly switch between display profiles.
- **Window Shuffle** [97 Downloads](#) — distribute windows across workspaces and collect them back.

Translation bundle powered by our AI-based Translation-API

- **Translation-API** is a lightweight translation server you can host anywhere.
- **GNOME Shell extension** **TranslatePlace**
- **Browser extensions** **WebTranslatePlace** (Chrome/Chromium, Firefox, Thunderbird, Safari, and GNOME Web)

All of these extensions can translate user-selected text and replace it with the desired translation, making translation intuitive and avoiding unnecessary extra steps. Supported environments include the GNOME Shell desktop, web browsers, and email clients such as Thunderbird.

Administration tools

- **Modern Midnight Commander** — a fork with trash actions, Wayland clipboard support, DotName skins, and ultra-fast ZIP extraction, packaged with Nix.

Backup tools

- **SafeData** — Universal backup script for LVM volumes and regular directories. It supports rsync and tar backups with include, exclude, or all filtering rules while preserving extended filesystem metadata.

Development tools and templates

- **NixonCpp** — Create your C++ applications and libraries. [A running WebAssembly build that documents the project it represents.](#)

Music production hardware & software

- **DreamScaler** — DreamScaler brings musical scales, harmony, and color to your keys with a standalone app and an LED strip.
- **Bitwig Cheatsheet** — find Bitwig Studio keyboard shortcuts for Windows, Linux, and macOS mapped to a standard ISO/QWERTY keyboard layout.
- **Bitwig Transport Control Script** — control Bitwig Studio transport with mouse side buttons, even when a plugin window has focus, on Linux with X11.
